New polynucleotides encoding secreted asthma, HIV and Crohn's disease. proteins useful for treating e.g.

Page 291; 391pp; English

The present invention relates to the isolation of novel cDNA sequences CC which encode human secreted proteins. The cDNA sequences have been CC derived from a variety of human tissues. The invention also provides a CC method for producing proteins from these polynucleotide sequences. The CC proteins are useful for identifying compounds that modulate their CC compounds that modulate expression of the polynucleotide sequences (compounds that modulate expression of the polynucleotide sequences (concoding the secreted proteins. The sequences of the invention are useful CC for treating diseases such as hyperproliferative disorders (e.g. cancer), cmmune deficiency disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and CC (screttious disorders (e.g. hepatitis). The polynucleotide sequences of the invention are also useful in gene therapy. AAS62214-AAS62838 CC represent the CDNA sequences of the invention that encode for novel human constraints. proteins

```
The present invention relates to the isolation of novel cDNA sequences which encode human secreted proteins. The cDNA sequences have been derived from a variety of human tissues. The invention also provides a method for producing proteins from these polynucleotide sequences. The proteins are useful for identifying compounds that modulate their cativity and production, and the cell is also useful for identifying compounds that modulate expression of the polynucleotide sequences compounds that modulate expression of the polynucleotide sequences cancoding the secreted proteins. The sequences of the invention are useful for treating diseases such as hyperproliferative disorders (e.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and infectious disorders (e.g. hepatitis). The polynucleotide sequences of the invention are also useful in gene therapy. AAS52214-AAS52838
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in
                                                                                                                          New tumor-associated antigenic target polypeptides and nucleic useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian

                                                                                    CC mammals. The invention also relates to nucleic acid and polypeptide gequences at least 80% identical to the TAT nucleic acids and collected and polypeptides; expression vectors and host cells comprising a TAT nucleic acid, an antibody specific for a TAT polypeptide; a peptide or organic conformal composition and methods and compositions for the treatment or collectule which binds to a TAT polypeptide; fusion proteins comprising a CC TAT polypeptide; an antibody appear of the methods and compositions for the treatment or collectual cancer, antagonists, binding molecules and compositions are useful corrected cancer, the particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central concer, pancreatic cancer, cervical cancer, cancers of the central concer, pancreatic cancer, cervical cancer, cancers of the central concer, pancreatic cancer, cervical cancer, cancers of the central concer, pancreatic cancer, cervical cancer, cancers of the central concers as hybridisation probes, in chromosome and gene mapping, in concers of the cancer cancer cancer cancer and gene mapping, in the cancer cancer and gene mapping in the cancer cancer cancer and gene mapping in the cancer 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TAT nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                with

AC AR The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB199912, encoding the protein sequences in AB857020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an expression as an the

                                                                                                                                                                                                                                                       The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cytostatic; Anti-inflammatory; Osteopathic; Neuroprotective; Nootropic; Gene Therapy; human; secretory protein; membrane proteins; cancer; inflammatory disease; osteoporosis; neurological disease; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                 New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Yamamoto

CC This invention relates to novel, isolated full length human cDNA CC molecules and the encoded proteins thereof. Specifically, it refers to CC cDNA clones obtained by an oligo-capping method, where none of these CC clones are identical to any known human mRNAs. The present invention CC describes an immunoassay to identify agonists and antagonists, as well as CC antibodies, antisense molecules and siRNAs that can all be used to bind CC to and modulate expression of the cDNA molecules. As such, these CC the various diseases or morbid states. In particular, they are useful in CC gene therapy for treating osteoporosis, neurological disease, Altheimer's CC disease, Parkinson's disease, dementia, short memory and various cancers, as well as for maintaining equilibrium of sense or motor function, and CC as well as for maintaining equilibrium of sense or motor function, and CC they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, CC cytostatic and tranquiliser activities. This polymucleotide is a full CC cytostatic and tranquiliser activities. This polymucleotide is a full CC cytostatic and tranquiliser activities. This polymucleotide is a full CC cytostatic and tranquiliser activities. This polymucleotide is a full CC cytostatic and tranquiliser activities. This polymucleotide is a full CC cytostatic conductor of the invention. NOTE: This sequence is not CC co-ROM from the European Patent Office, Vienna Sub-office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isogai T, Ya
Wakamatsu A,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gene; ss; human; oligo-capping method; diagnostic marker; gene therapy osteoporosis; neurological disease; Alzheimer's disease; Parkinson's disease; dementia; short memory; cancer; sense or motor function; emotional reaction; fear response; panic; osteopathic; neuroprotective; nootropic; antiparkinsonian; cytostatic;

                                                                                     ş
                                                                                                                                                                                 The present invention describes an isolated PRO nucleic acid (1). Also CC described: (1) a vector comprising (1); (2) a host cell comprising the vector of (1); (3) a process for producing a PRO polypeptides; (4) an CC isolated PRO polypeptide; (5) a chimeric molecule comprising the CC polypeptide of (4) fused to a heterologous amino acid sequence; (6) an CC antibody which specifically binds to a polypeptide of (4); (7) a CC composition of matter comprising a polypeptide of (4), an agonist or CC polypeptide in combination with a carrier; (8) an article of manufacture comprising a container, a label on the container and a composition of CC matter of (7); (9) a method of treating an immune related disease in a CC mammal; (10) a method for determining the presence of a PRO polypeptide (1) a sample suspected of having the polypeptide; (11) a method of CC diagnosing an immune related disease or an inflammatory immune response CC in mammal; (12) a method of identifying a compound that inhibits or CC minics the activity of or expression of a gene encoding a PRO polypeptide (2); and (13) a method of stimulating the immune response in a mammal; (12) a method of stimulating the immune response in a PRO polypeptide (2); and (13) a method of stimulating the immune response in a mammal. The CC antiasthmatic, antitabletic, antiinflammatory, antiarthritic, CC antiasthmatic, antitabletic, antiantant, immunesuppressive, muscular, CC that the encoded polypeptide, immunostimulant, immunosuppressive, muscular, cephrotropic, neuroprotective, osteopathic, respiratory, vasotropic and CC ill and the encoded polypeptides, compositions, kits and methods are useful in diagnosing and treating an immune related disease and in CC productide sequence from the present sequence represents a human CC productide sequence from the present invention.
                                                                                                                    Query Match

Sequence 3769, Application US/09880107

Patent No. US20020142981A1

GENERAL INFORMATION:

APPLICANT: Horne, Darci T.

APPLICANT: Vockley, Joseph G.

APPLICANT: Scherf, Uwe

APPLICANT: Gene Logic, Inc.

TITLE OF INVENTION: Gene Expression Profiles in Liver Cancer

PILE REFERENCE: 44921-9028-W0

CURRENT FILING DATE: 2001-06-14

PRIOR APPLICATION NUMBER: US 60/211,379

PRIOR APPLICATION NUMBER: US 60/211,379

PRIOR APPLICATION NUMBER: US 60/237,054

PRIOR PILING DATE: 2000-10-614

PRIOR PILING DATE: 2000-10-62

NUMBER OF SEQ ID NOS: 3950

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 3769

LENGTH: 2390

TYPE: DNA

ORGANISM: Homo sapiens

FEATURE:

OTHER INFORMATION: Genbank Accession No. US20020142981A1 X66899
